About API

The API enables third party applications to connect with REMITBOOK and perform validations, inquiries and execute transactions through secure connection. The API also provides 24/7 transaction facility for real time processing.

About APIs Security

Web API security is concerned with the transfer of data through APIs that are connected to the internet. OAuth (Open Authorization) is the open standard for access delegation. It enables users to give third-party access to web resources. Password and user id are encrypted as well as the transactional data for extra security measure. Connection is secured with IP whitelisting in both network layer and App layer.
